

Farnham

According to Dr Thresh's report of 1905, p51, except for some cottages at Chatter End and part of Farnham Green, the Parish was fairly supplied from Wells and a spring, with a pump. A Well 120ft deep, for public safety, at Farnham Green was abandoned.

(No Wells or Pumps reported or found the date)

The following pumps are recorded in Whitaker, W & Thresh, J (1916) Memoirs of the Geological Society England and Wales. The Water Supply of Essex from underground sources, Great Britain, Jas Truscott & Son

These Wells and pumps are still to be confirmed to the Author, they come from records made in 1916, so it might be that they no longer exist. Many though are on private property and the Author would welcome confirmation of their existence and to record them.

FARN01: Thrifts, (formerly Perry's farm) Farnham Green, Farnham Green, Farnham CM23 1HL
Recorded as sunk in 1892 by Ingold of Bishops Stortford, Well shaft 123ft deep with water at 119ft through clay then chalk. Recorded as being sealed over in the 1965

FARN02: The Rectory (Thrimley House), Farnham CM23 1HX
Made and communicated by G Ingold in 1893, Well shaft 23ft deep through clay then sand, water at 19ft.

Hassobury Residential School (formerly Hassobury Hall, now The Gosling), Farnham
Old Well date un-known – dis-used but visible in 1965)

Felsted

According to Dr Thresh's report of 1910, p117: the village then "depended on one superficial Well and was badly off for water. There is now a public supply from springs. Since 1901 a company provided a supply from a spring rising from a pond a little below the school, the water being raised to a tank n the tower. The spring is protected by an iron cylinder and was bought in 1912 by the Dunmow Rural District Council. The water is good. The yield is about 20,000 gallons per day".

Pump/Well No. FELST01

(No picture available to date)

Location:	Well still with well-head at Bridgehouse farm, Hollow Road, Felsted, Dunmow, Uttlesford, Essex, CM6 3JF
